Change in Recommended Mating Connector for LPQ200-M Series

To: Artesyn Embedded Technologies IM&D Sales Channel
From: Jane Carlson
Subject: Mating Connector
Date: October 9, 2014

We are making a change in the recommended mating connector for the LPQ200-M series power supply. We are now recommending the Molex 09-50-3031 as it is more easily inserted and offers better clearance to the surrounding materials. The Molex 09-50-8031 may still be used only if there is sufficient clearance around the fuse tubes where damage will not occur.

The datasheet reflecting this change is available on our website www.Artesyn.com
